Author Index

Åhlin, A.	Sliding wear and friction of Si_3N_4–SiC-based ceramic composites containing hexagonal boron nitride	381–387
Aktürk, N.	The effect of ball size variation on vibrations associated with ball-bearings	101–110
Al-Najjar, B.	Improved effectiveness of vibration monitoring of rolling bearings in paper mills	111–120
Anabtawi, M. Z.	Layered flow in slider bearings	47–54
Athre, K.	Rapid and globally convergent method for dynamically loaded journal bearing design	207–214
Axén, N.	Sliding wear and friction of Si_3N_4–SiC-based ceramic composites containing hexagonal boron nitride	381–387
Barnes, C. G.	Aspects of thrust cone tribology. Part 1: effects of slide to roll ratio on surface failure mechanisms in twin-disc tests	55–72
Barnes, C. G.	Aspects of thrust cone tribology. Part 2: surface failure in thrust cones and the influence of rolling and sliding speeds in concentrated contacts	73–83
Bassani, R.	An investigation on thrust bearing tilting pads	271–277
Bell, J. C.	Gasoline engine valve train design evolution and the antiwear requirements of motor oils	243–257
Bell, J. C.	Mid-life scuffing failure in automotive cam–follower contacts	259–269
Beynon, J. H.	The influence of surface conditions in hot forming determined by ring upsetting: a numerical and experimental investigation	453–465
Bhushan, B.	Micro/nanotribology using atomic force microscopy/friction force microscopy: state of the art	1–18
Bhushan, B.	Contact analysis of non-Gaussian random surfaces	19–32
Biswas, S.	Rapid and globally convergent method for dynamically loaded journal bearing design	207–214
Blencoe, K. A.	The influence of lubricant rheology and surface topography in modelling friction at concentrated contacts	391–399
Bloyce, A.	Surface engineering of titanium alloys for wear protection	467–476
Bradley, M. S. A.	Observations on and the modelling of erosive wear of a long-radius pneumatic conveyor bend	369–379
Burnett, A. J.	Observations on and the modelling of erosive wear of a long-radius pneumatic conveyor bend	369–379
Camino, D.	Novel high wear resistant diamond-like carbon coatings deposited by magnetron sputtering of carbon targets	301–306
Chen, H.	Numerical analysis for the influence of water film on adhesion between rail and wheel	359–368
Chen, P. Y. P.	Use of computational fluid dynamics in hydrodynamic lubrication	427–436
Chilamakuri, S. K.	Contact analysis of non-Gaussian random surfaces	19–32
Childs, T. H. C.	Land friction effects in the meshing of timing belts	87–100
Ciulli, E.	An investigation on thrust bearing tilting pads	271–277
Czołczyński, K.	Stiffness and damping coefficients of air rings with a chamber feeding system	131–143
Fletcher, J. D.	The influence of surface conditions in hot forming determined by ring upsetting: a numerical and experimental investigation	453–465
Forte, P.	An investigation on thrust bearing tilting pads	271–277
Gohar, R.	The effect of ball size variation on vibrations associated with ball-bearings	101–110
Greenwood, J. A.	Elastohydrodynamic film thickness for shear-thinning lubricants	179–191
Gui, C. L.	Two-dimensional lubrication study of the piston ring pack	215–220
Gui, C. L.	A comprehensive study of the friction and dynamic motion of the piston assembly	221–226
Guo, Y.	Molecular dynamics simulation of ultra-thin lubricating films	165–170
Guo, Y.-c.	The influence of fluid inertia forces on the sudden unbalance responses of squeeze-film damper supported rotors	353–357
Haddad, A.	Elastohydrodynamic analysis of one-layered journal bearings	193–205
Hahn, E. J.	The influence of fluid inertia forces on the sudden unbalance responses of squeeze-film damper supported rotors	353–357
Hahn, E. J.	Use of computational fluid dynamics in hydrodynamic lubrication	427–436
Hirani, H.	Rapid and globally convergent method for dynamically loaded journal bearing design	207–214
Hirano, F.	A study of temperature rise in oil due to compression	291–299
Hogmark, S.	Sliding wear and friction of Si_3N_4–SiC-based ceramic composites containing hexagonal boron nitride	381–387
Hojjati, M. H.	Land friction effects in the meshing of timing belts	87–100
Hooke, C. J.	Surface roughness modification in elastohydrodynamic line contacts operating in the elastic piezoviscous regime	145–162

Hu, Y.-z.	Molecular dynamics simulation of ultra-thin lubricating films	165–170
Ibrahim, G. A.	Layered flow in slider bearings	47–54
Imado, K.	A study of temperature rise in oil due to compression	291–299
Ionnides, E.	Effects of debris particles in sliding/rolling elastohydrodynamic contacts	333–343
Jalali-Vahid, D.	Elastohydrodynamic solution for concentrated elliptical point contact of machine elements under combined entraining and squeeze-film motion	401–411
Jang, S.	Modelling of mixed hydrodynamic and boundary lubrication: layered structures and shear thinning	171–177
Jiang, J.	Novel high wear resistant diamond-like carbon coatings deposited by magnetron sputtering of carbon targets	301–306
Jin, Z. M.	Elastohydrodynamic solution for concentrated elliptical point contact of machine elements under combined entraining and squeeze-film motion	401–411
Jones, A. H. S.	Novel high wear resistant diamond-like carbon coatings deposited by magnetron sputtering of carbon targets	301–306
Kapitaniak, T.	Stiffness and damping coefficients of air rings with a chamber feeding system	131–143
Kauzlarich, J. J.	Elastohydrodynamic film thickness for shear-thinning lubricants	179–191
Kauzlarich, J. J.	Viscosity times density equations for five classes of lubricants	235–239
Kelly, D. A.	Aspects of thrust cone tribology. Part 1: effects of slide to roll ratio on surface failure mechanisms in twin-disc tests	55–72
Kelly, D. A.	Aspects of thrust cone tribology. Part 2: surface failure in thrust cones and the influence of rolling and sliding speeds in concentrated contacts	73–83
Kido, Y.	A study of temperature rise in oil due to compression	291–299
Knox, R. T.	The development of PTFE (polytetrafluoroethylene)-faced hydrodynamic thrust bearings for hydrogenerator application in the United Kingdom	345–352
Kohno, M.	Land friction effects in the meshing of timing belts	87–100
Lahmar, M.	Elastohydrodynamic analysis of one-layered journal bearings	193–205
Li, Y. H.	The influence of surface conditions in hot forming determined by ring upsetting: a numerical and experimental investigation	453–465
Liu, K.	Two-dimensional lubrication study of the piston ring pack	215–220
Liu, K.	A comprehensive study of the friction and dynamic motion of the piston assembly	221–226
Maekawa, K.	Computational aspects of tribology in metal machining	307–318
Majumdar, B. C.	Stability analysis of a rigid rotor supported on hydrodynamic journal bearings with rough surfaces using the stochastic finite element method	121–130
Martin, F. A.	Oil flow in plain steadily loaded journal bearings: realistic predictions using rapid techniques	413–425
Marynowski, K.	Stiffness and damping coefficients of air rings with a chamber feeding system	131–143
Meng, G.	The influence of fluid inertia forces on the sudden unbalance responses of squeeze-film damper supported rotors	353–357
Miyagawa, H.	A study of temperature rise in oil due to compression	291–299
Moss, W. O.	The development of PTFE (polytetrafluoroethylene)-faced hydrodynamic thrust bearings for hydrogenerator application in the United Kingdom	345–352
Nabhan, M. B. W.	Layered flow in slider bearings	47–54
Nakamura, T.	Land friction effects in the meshing of timing belts	87–100
Nélias, D.	Location of an acoustic emission source in a radially loaded deep groove ball-bearing	33–45
Nicolas, D.	Elastohydrodynamic analysis of one-layered journal bearings	193–205
Nikas, G. K.	Effects of debris particles in sliding/rolling elastohydrodynamic contacts	333–343
Ohyama, T.	Numerical analysis for the influence of water film on adhesion between rail and wheel	359–368
Olver, A. V.	Prediction of traction in elastohydrodynamic lubrication	321–332
Pittman, A. N.	Observations on and the modelling of erosive wear of a long-radius pneumatic conveyor bend	369–379
Pomeroy, P. E.	The contribution of erosive wear to the performance degradation of sliding spool servovalves	437–451
Rahnejat, H.	Elastohydrodynamic solution for concentrated elliptical point contact of machine elements under combined entraining and squeeze-film motion	401–411
Roper, G. W.	The influence of lubricant rheology and surface topography in modelling friction at concentrated contacts	391–399
Rudd, L. M.	Aspects of thrust cone tribology. Part 1: effects of slide to roll ratio on surface failure mechanisms in twin-disc tests	55–72
Rudd, L. M.	Aspects of thrust cone tribology. Part 2: surface failure in thrust cones and the influence of rolling and sliding speeds in concentrated contacts	73–83
Sayles, R. S.	Effects of debris particles in sliding/rolling elastohydrodynamic contacts	333–343
Sekhar, A. S.	Stability analysis of a rigid rotor supported on hydrodynamic journal bearings with rough surfaces using the stochastic finite element method	121–130
Sellars, C. M.	The influence of surface conditions in hot forming determined by ring upsetting: a numerical and experimental investigation	453–465
